FiS500 : Sectional Door

rev 1

The Fortress FiS500 sectional door is designed for applications requiring security coupled with a high degree of thermal or acoustic insulation. The doors are highly versatile and can be visually customised with a range of fenestration options.

Specification Overview

FIS500 Sectional Overhead Door

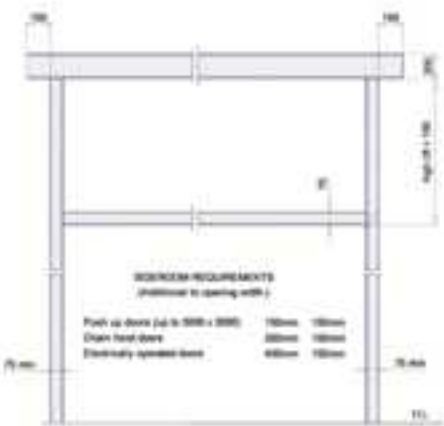

The Fortress FIS500 sectional door provides a high degree of thermal insulation and noise protection for factories, warehouses, garages, large industrial and agricultural buildings. The doors are suitable for openings up to 7000mm x 7000mm. Available in either manual or automatic formats (manual maximum dimensions = 3000mm x 3000mm.) The guide construction creates an almost airtight bond with the pannel thus minimising air transfer at the access point. Because of this, sectional doors are also recommended for use in applications requiring high levels of hygiene and anti contamination - healthcare buildings, food manufacturing plants.

Panels are constructed from two skins of galvanised steel with polyurethane foam core insulation. Panel dimensions = 610mm x (specified width) x 40mm. Panels are available in solid construction or with glazed vision sections. Can be coated in either a polyester or plastisol finish to outer skin only. Internal panel is stucco embossed PPC finish. Can be powder coated in a range of colours.

A number of additional control options are available including rocker switches, remote control operation and self checking safety edges. For more information on Fortress sectional doors please contact us on +44 (0)1942 817 489.
