Strength in Design

The **Fortress Security Division** specialise in getting protection between you and the threat - no matter what that may be.

Our doors are rated to LPCB level 5 for physical security in addition to high ballistic resistance, ensuring you and your valuables remain safe and secure.

We bring total confidence to our clients through the design process. We utilise the latest 3D modelling and stress analysis technology to model and test our products. Then verify of our products via third party accredited bodies and consultants.

## The facts on Firearm crime

In 2011-2012 alone there have been over 11,500 reported cases of violent gun crime in the UK\* - regarded as one of the safest countries worldwide.

Since 1990 this figure has steadily risen, most often utilising handguns but more recently this rise is including higher velocity automatic weapons and rifles.

Since 2002 there has been a 12% increase in the use of high velocity weaponry\* in robberies, burglaries and crimes against the person.

Utilising the latest approved high velocity ballistic steel technology, even our entry level BBS3 high security door systems will stop a wide range of ballistic threats up to FB4 (EN 1522/1523) and LPCB level 3 (LPS1175 issue 7), up to our BBS5 which will resist FB6 (EN1522/1523) and tested to LPCB level 5 (LPS 1175 issue 7).
