 C&C (Belfast) Ltd Magners,
 Club Orange, etc

 Fortress Doors (NI) Ltd now offers another section in their insulated roller shutter door DBi100 range. The general construction of the DBi101 product is similar to the existing DBi100. The product is designed to comply with the new European Directives effective from May 2005.

GENERAL SPECIFICATION

The new section has three new features:

1. Interlocking Alloy End-Locks

The Alloy End-Locks offers strength, greater curtain rigidity and enhanced overall stability.

2. Dual Ribs

Offering ribs into the lath section increases the profile rigidity, and aesthetics.

NOTE: Sections carrying windows do not have ribs.

3. 'ACS' Base Bar

Again Fortress are breaking new grounds with their Revolutionary galvanised roll-formed base bar called "ACS" (Anti-Catch-System).

The ACS is designed to accept a simple neoprene profile or safety edge alternative.

The base bar is compatible with most Fortress roller door products and should be compatible with 90% of alternative manufactures products.

Please contact our Sales Department for further information.
